VISION PERFORMANCE INC.

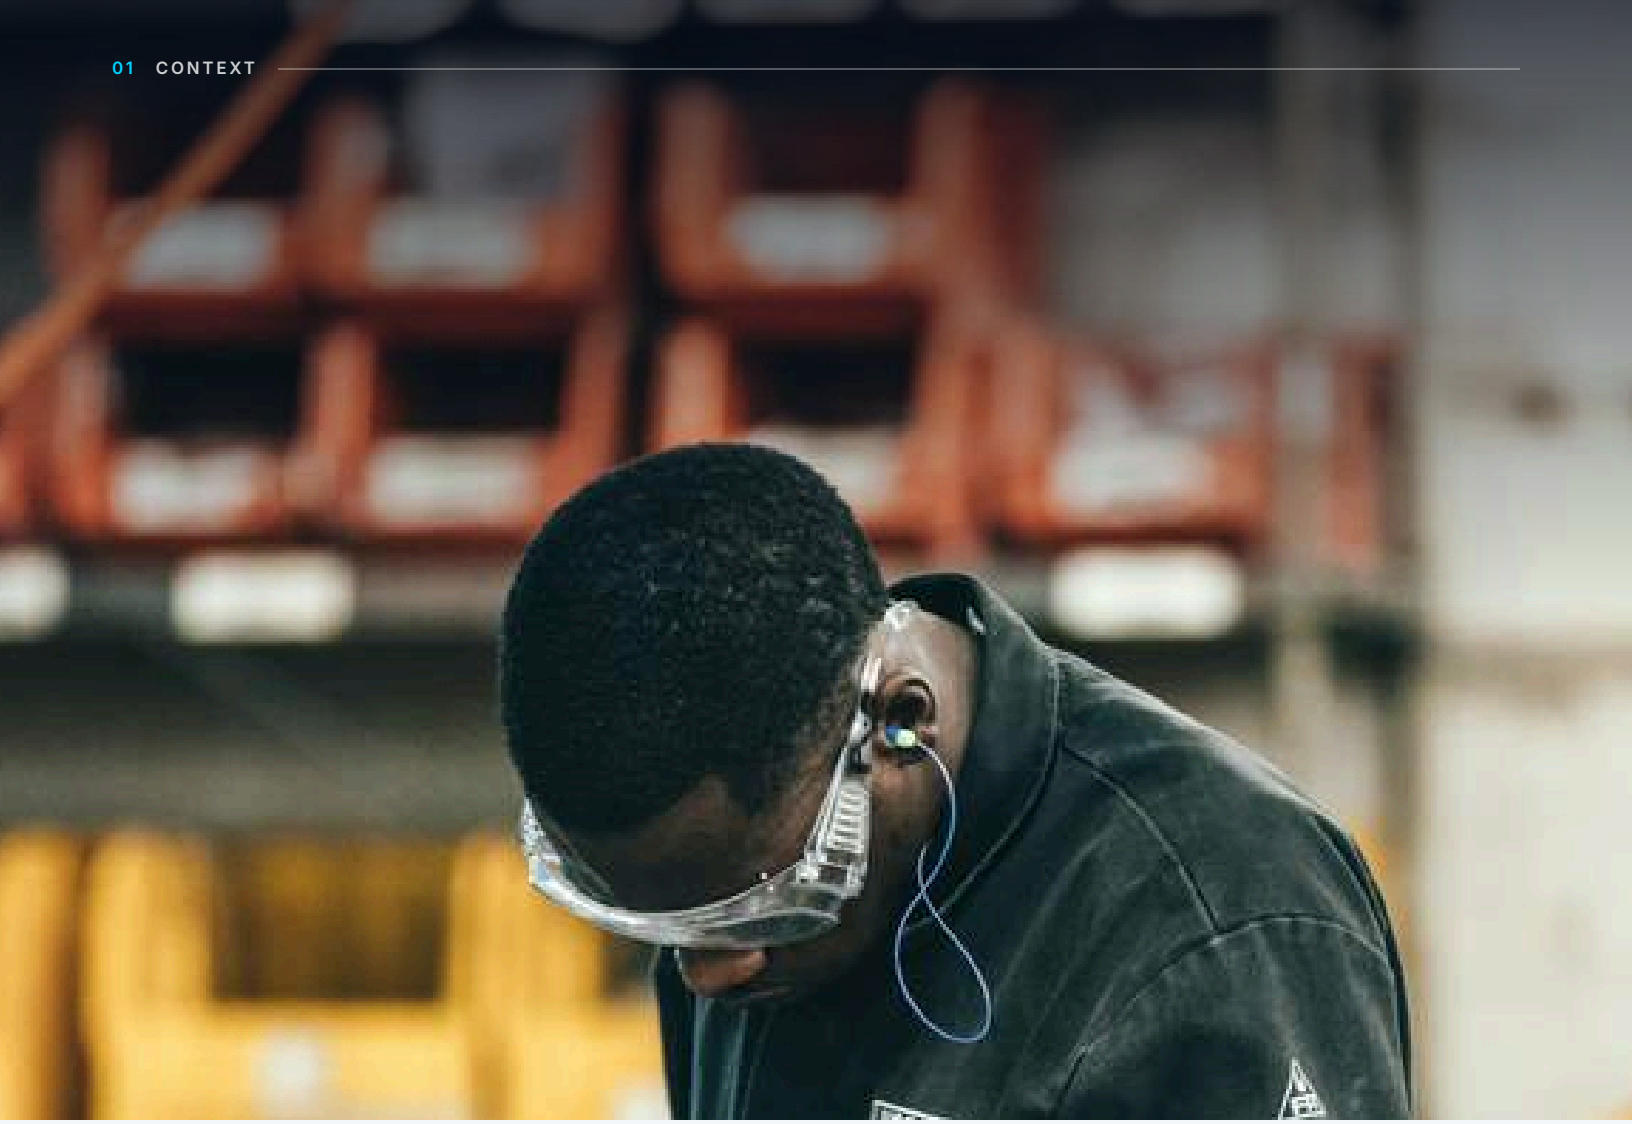

CORPORATE PROFILE 2026

Edmonton, Alberta, Canada

Vision. Safety. Technology.

Building a connected approach to how people see at work.

OUR PREMISE

How well people see can affect how well they work.

Yet workplace vision sits between disciplines. Eye care happens in clinics. Safety happens at work. The eyewear and habits workers depend on every day belong to both worlds—and are rarely designed with both in mind.

Vision Performance Inc. was founded to connect those worlds.

IN THIS PROFILE

01	Context	02
02	Ecosystem	07
03	Occupational Vision	09
04	Mobile & Clinical Care	14
05	VPI Technology	18
06	Value & Trust	26
07	Company	29

AT A GLANCE

Where vision care meets workplace safety.

Vision Performance Inc. is an Edmonton company connecting clinical eye care, employer systems, workplace safety and purpose-built technology.

Clinical eye care
Examinations, prescriptions and follow-up

Employer systems
Eligibility, authorization, HR and benefits

Technology
Software that holds records and workflows together

Workplace safety
Hazard assessment, PPE and field practice

Edmonton's river valley. VPI is headquartered in Edmonton, Alberta.

Edmonton Alberta, Canada
Headquarters

3 connected areas of work
Occupational vision · Clinical & mobile care · Technology

2 commercial software products
VPI SafetyOS™ and VPI Mires™, available now

1 internal operations platform
VPI Command Centre, not offered for sale

CLEAR ABOUT STATUS

Every capability in this profile carries one of four labels.

AVAILABLE NOW
Commercially available products and capabilities you can engage today.

INTERNAL PLATFORM
Proprietary infrastructure VPI uses to run its own operations.

IN DEVELOPMENT
Programs and capabilities actively being prepared.

PLANNED
Approved future strategy that is not yet operating.

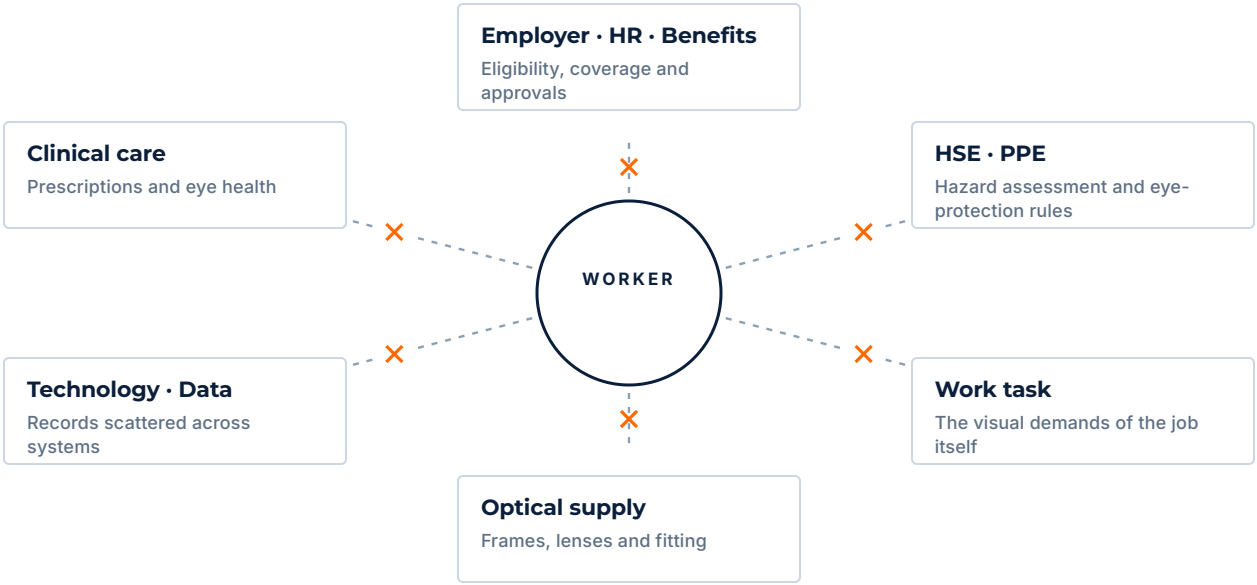

THE GAP

Six systems. One worker. Few connections.

A worker's vision at work is shaped by decisions made in places that were designed separately—and rarely talk to each other.

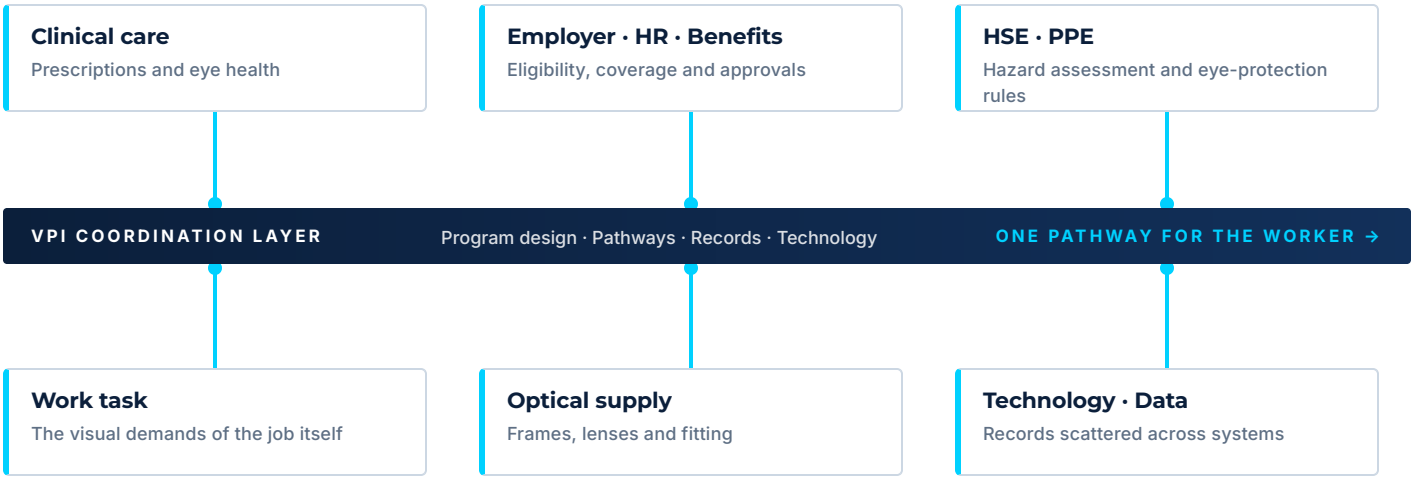

TODAY · HISTORICALLY SEPARATE SYSTEMS

× HAND-OFFS THAT OFTEN BREAK

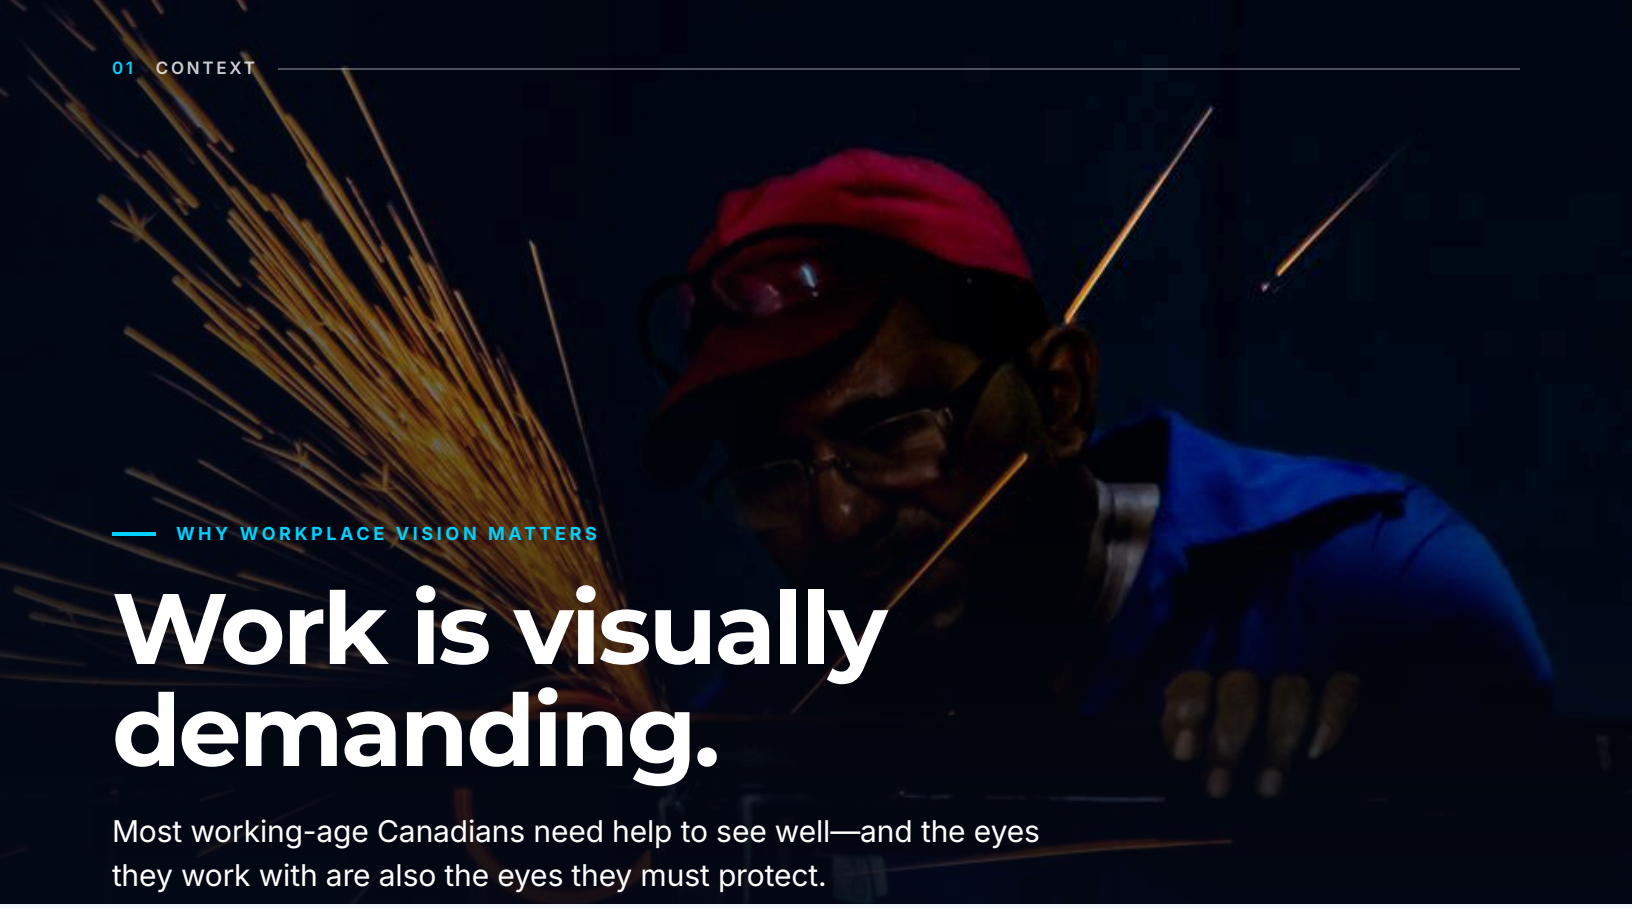

WITH VPI · ONE COORDINATED PATHWAY

SOLID LINES: COORDINATED BY VPI

VPI is being built to organize the vision-related parts of an employer's safety program. It is designed to work within—not replace—the employer's hazard assessment and safety program.

WHY WORKPLACE VISION MATTERS

Work is visually demanding.

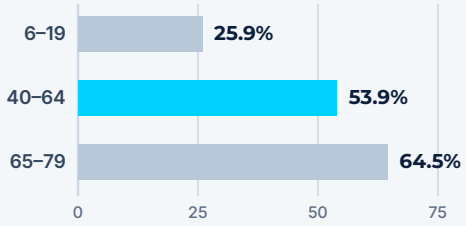

Most working-age Canadians need help to see well—and the eyes they work with are also the eyes they must protect.

MEASURED EYESIGHT · CANADA

53.9%

of adults aged 40–64 needed glasses or contact lenses to see at 20/40 or better.

NEEDED CORRECTION TO REACH 20/40 · BY AGE

Adults aged 20–39 were not vision-tested in the survey.

THE COST OF VISION LOSS

$32.9B

total cost of vision loss in Canada in 2019.

1.2M

Canadians living with vision loss.

$3.98B

in productivity losses in the same year.

123,587

Albertans living with vision loss.

THE RULE IN ALBERTA

Eye protection is an employer duty.

Where a worker's eyes may be injured or irritated, the employer must ensure the worker wears eye protection approved to CSA Z94.3 and appropriate to the work and the hazard.

Prescription eyewear worn as eye protection must meet the same requirements.

Alberta OHS Code, Part 18, s. 229 (paraphrased)

Sources: Statistics Canada, Canadian Health Measures Survey 2016–2019, *The Daily*, 14 December 2020. Deloitte for the Canadian Council of the Blind, *The cost of vision loss and blindness in Canada* (2021), 2019 figures. Alberta Occupational Health and Safety Code, Part 18, s. 229 (consolidation current to 31 March 2025); paraphrased, consult the Code for exact wording.

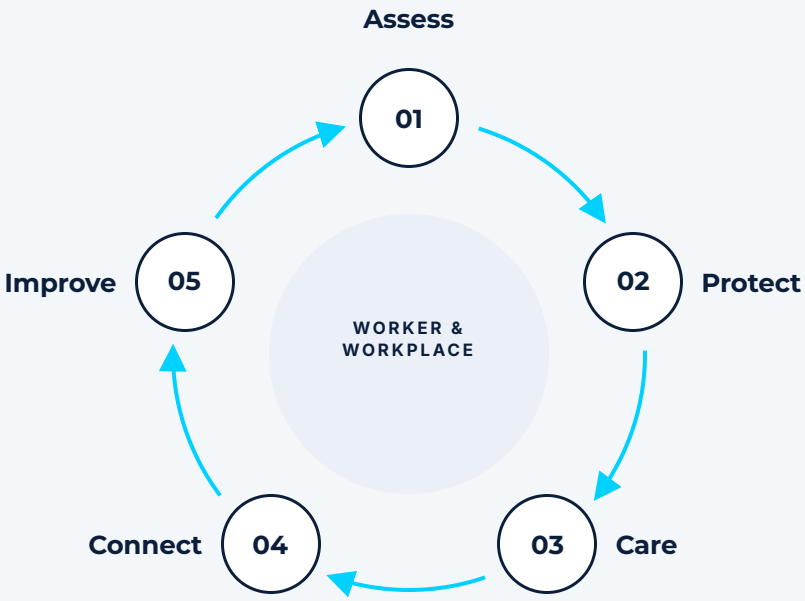

Eye protection sits alongside every other layer of PPE.

THE VPI APPROACH

A connected framework, not a single service.

Five activities that usually sit in different departments, organized as one continuous loop around the worker and the workplace.

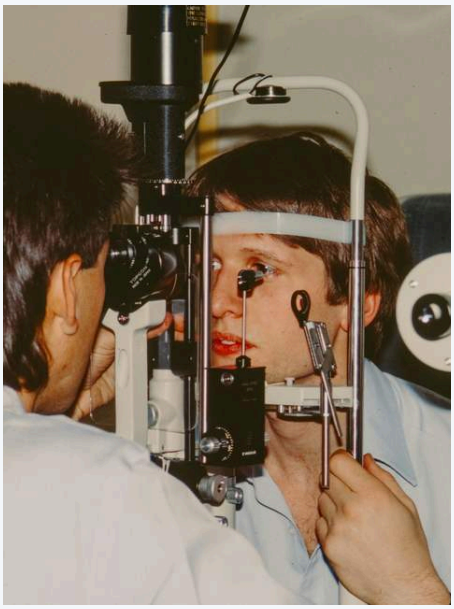

01	**Assess.** Understand the visual demands and hazards of each role.
02	**Protect.** Align eye protection with the worker, the task and the hazard.
03	**Care.** Create clear pathways to appropriate eye care.
04	**Connect.** Coordinate employer, clinical and operational workflows.
05	**Improve.** Use structured program information to keep improving.

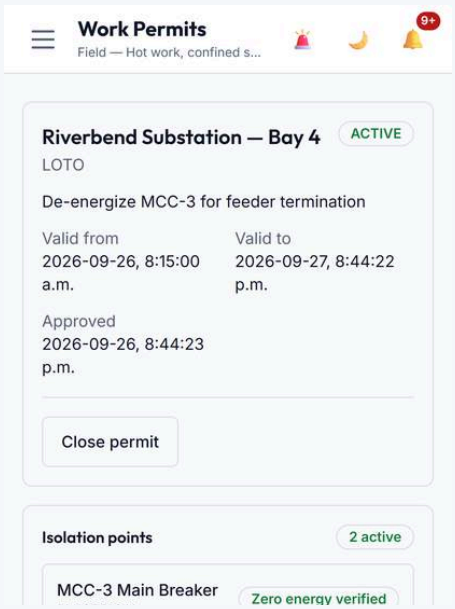

ONE COMPANY

Three connected capabilities. One deliberate company.

Each capability stands on its own. Together they form one ecosystem around how people see at work.

01 IN DEVELOPMENT

Occupational Vision

Employer programs that address how people see at work, alongside the hazards they work around.

- Employer vision programs
- Prescription safety eyewear
- Visual ergonomics
- Workplace eye health

02 PLANNED

Clinical & Mobile Care

Bringing appropriate care closer to workers, with clear pathways to conventional clinical care.

- Mobile vision clinics
- Clinical & optical network
- Referral pathways

03 AVAILABLE NOW INTERNAL

VPI Technology

Software built for real safety and clinical workflows—two commercial products and the platform VPI runs on.

- VPI SafetyOS™
- VPI Mires™
- VPI Command Centre

This is a capability architecture, not a legal organization chart. All capabilities are developed and delivered by Vision Performance Inc.

THE VPI ECOSYSTEM

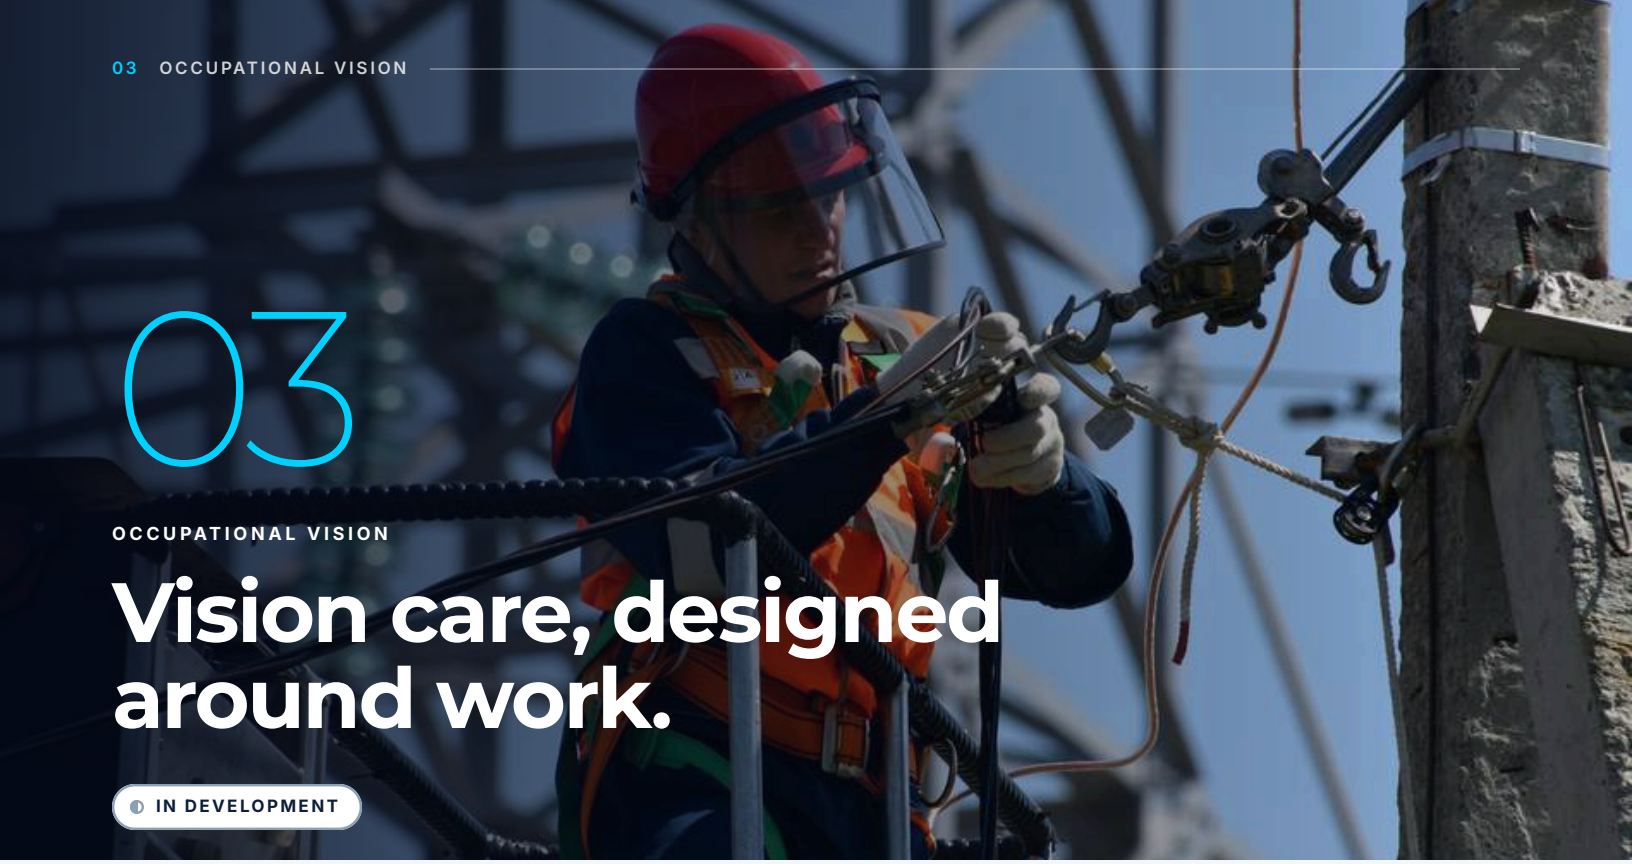

Built to connect.

Occupational vision defines the problem. Clinical and mobile care bring appropriate services closer to workers. Technology holds the records and workflows together.

AVAILABLE NOW · INTERNAL PLATFORM · IN DEVELOPMENT · PLANNED

Dashed connectors indicate planned capabilities.

03

OCCUPATIONAL VISION

Vision care, designed around work.

IN DEVELOPMENT

VPI's occupational vision model starts from the workforce rather than the clinic appointment: what each role demands of the eyes, what can harm them, and how the employer administers the program.

PROGRAM COMPONENTS

01 Role and visual-demand mapping

02 Eye-hazard considerations

03 Program eligibility and authorization

04 Prescription safety eyewear

05 Visual ergonomics and worker education

06 Referral and follow-up pathways

Visual requirements vary by role, task and environment

● commonly relevant

WORK ENVIRONMENT	IMPACT & FLYING PARTICLES	DUST, CHEMICALS & SPLASH	GLARE & OPTICAL RADIATION	PRECISION NEAR WORK	SCREEN-INTENSIVE WORK	DISTANCE, MOTION & DRIVING
Energy, oil & gas	●	●	●	·	·	●
Construction	●	●	●	·	·	●
Manufacturing & fabrication	●	●	●	●	·	·

Transportation & logistics	·	·	●	·	·	●
Control rooms & offices	·	·	●	●	●	·

Illustrative view of typical exposures. Actual eye-protection requirements come from each employer's hazard assessment.

EMPLOYER PROGRAM ARCHITECTURE

IN DEVELOPMENT

From policy to worker, in seven steps.

A structured program connects what the employer administers with what the worker experiences—and keeps each party's responsibilities clear.

● Leads ○ Participates

Proposed program model. VPI works within the employer's hazard assessment and safety program; it does not replace them.

PRINCIPLE

VPI qualifies complete protective systems—not simply frames.

PRESCRIPTION SAFETY EYEWEAR

Protection should not mean compromising vision.

IN DEVELOPMENT

Workers who need vision correction and work around eye hazards need eyewear that does both jobs. Without a program, it is common to see protectors worn over everyday glasses all shift, or safety glasses worn without a current prescription.

THE COMPLETE PROTECTOR SYSTEM

01 Frame
Marked by its manufacturer to the protective standard the hazard assessment requires.

02 Lenses
The worker's prescription, in protective lenses that carry their own markings.

03 Side protection
Coverage matched to the hazard: side shields, wraparound or sealed designs.

04 Coatings & lens options
Anti-fog, scratch-resistant or light-adaptive, where the task calls for them.

05 Fit & coverage
Fitted to the worker so protection stays where it should, all shift.

06 PPE compatibility
Works with hard hats, hearing protection, respirators and face shields.

Protective eyewear is tested and marked by its manufacturer to standards such as CSA Z94.3. VPI does not certify eyewear; material alone does not make a protector. In Alberta, prescription eyewear used as eye protection must itself meet the Code's eye-protection requirements (OHS Code, s. 229).

FROM HAZARD TO EYEWEAR

A disciplined pathway, start to finish.

The hazard, the task and the prescription stay visible at every step—so the eyewear a worker receives is right for the eyes and right for the job.

WHO OWNS THE STEP

- Employer / HSE
- VPI program
- Worker & eye-care provider

01
Work role
What the job is, where and how it is done.

→

02
Hazard / task requirement
Eye hazards identified in the employer's hazard assessment.

→

03
Visual requirement
Distances, detail, screens, lighting and motion in the task.

↓

04 ◆ GATE
Authorization
Employer approves eligibility and coverage level.

←

05
Clinical / prescription need
Current prescription from the worker's eye-care provider, or referral.

←

06
Complete protector system
Frame, lenses and coverage chosen together against the hazard.

↓

07 ◆ GATE
Fit & PPE compatibility
Fitted and checked with the other PPE the worker wears.

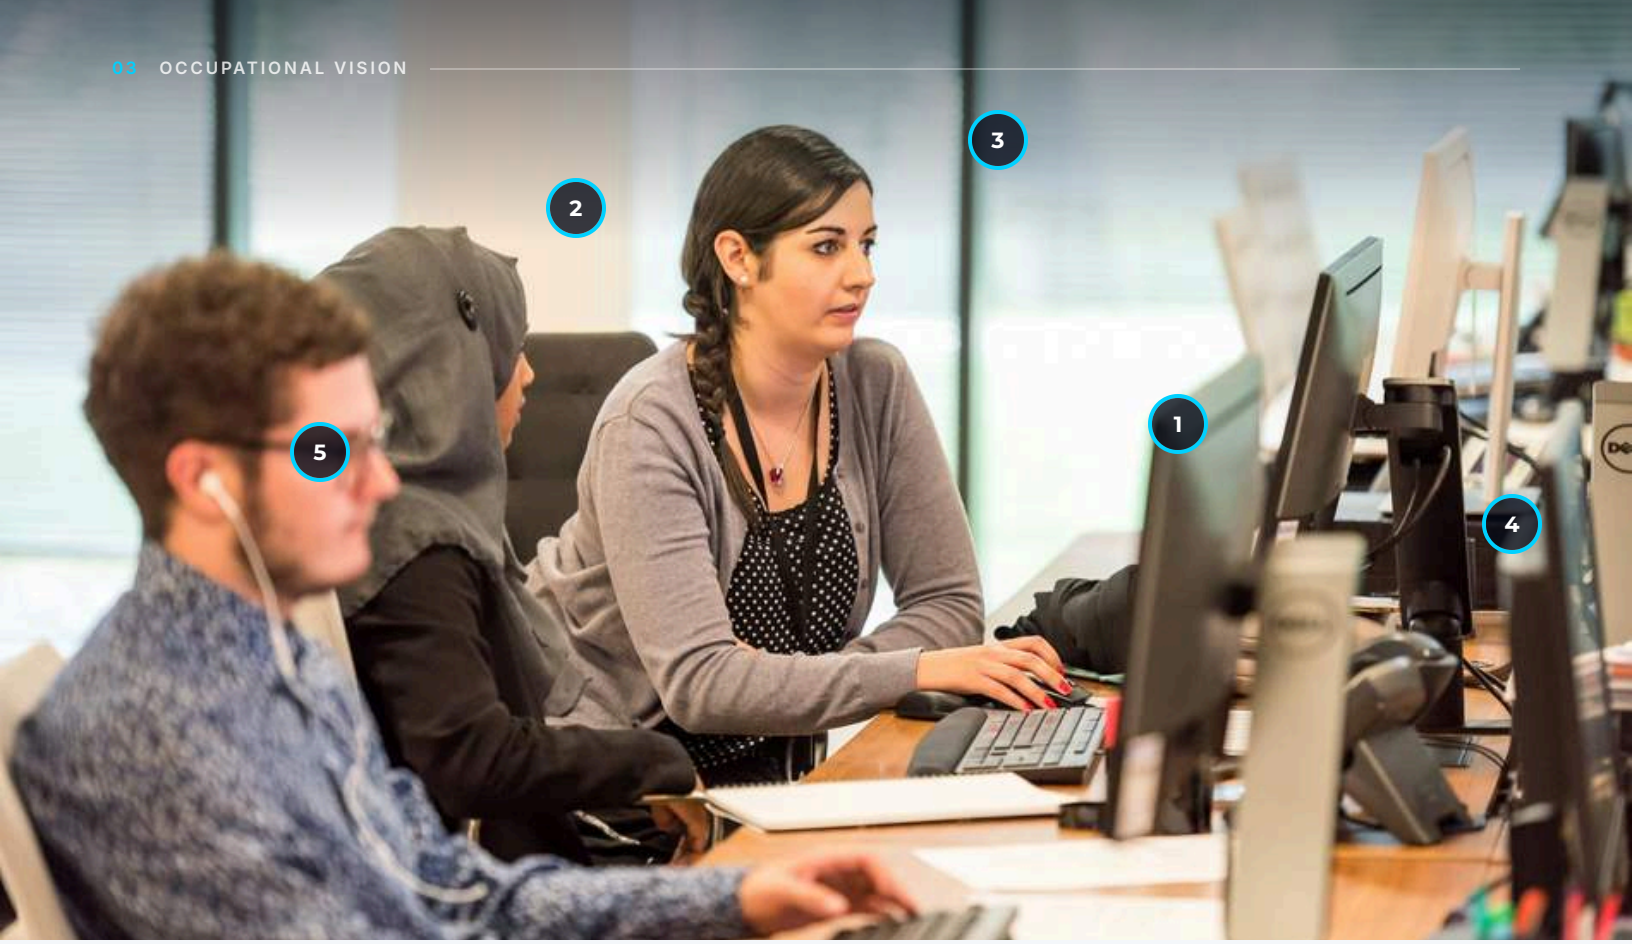

→

08
Delivery
Eyewear delivered with documentation for the program record.

→

09
Follow-up / replacement
On schedule, or sooner after damage or a prescription change.

◆ Gates are verification points: coverage is authorized before care begins, and required markings, fit and compatibility are confirmed before eyewear goes into service. Required markings and standards must be verified for each workplace and product.

VISUAL ERGONOMICS

Not every visual hazard flies through the air.

Screen-intensive and control-room work bring their own demands: distance, glare, lighting and hours of sustained focus.

IN DEVELOPMENT

Control rooms combine multiple displays, long shifts and critical attention.

1. **Viewing distance & screen height**
   Screens placed for the eyes, not just the desk.
2. **Glare & reflections**
   Windows, overhead lighting and screen reflections.
3. **Lighting & contrast**
   Balanced task and room lighting across shifts.
4. **Multi-display layouts**
   Control rooms and trading-style desks with several screens.
5. **Task & computer eyewear**
   Lenses suited to the working distance, not only to reading.
6. **Breaks & education**
   Simple habits workers can keep through a long shift.

Numbered markers show where each factor appears in a typical office setting. Illustrative stock photograph.

MOBILE VISION

PLANNED · NOT YET OPERATING

What if eye care came to the workplace?

CONCEPTUAL VPI MOBILE VISION CLINIC

Concept livery render. VPI does not currently own or operate mobile units.

VPI is planning mobile vision clinics that travel to employers, so assessments, eyewear fitting and referral coordination can happen on or near site with less disruption.

WHY WORKERS MISS EYE CARE

Shift work
Rotations rarely line up with clinic hours.

Remote facilities
Sites can be hours from the nearest clinic.

Travel
Time off site for a short appointment.

Scheduling
Coordinating many workers one by one.

Productivity
Crews short-handed while people are away.

MOBILE DELIVERY MODEL

PLANNED

From consultation to employer reporting.

A proposed workflow. Pilots with employers will help refine it before any clinic operates.

01 Employer consultation
Sites, workforce, shifts and goals.

02 Program design
Services, eligibility and scheduling agreed.

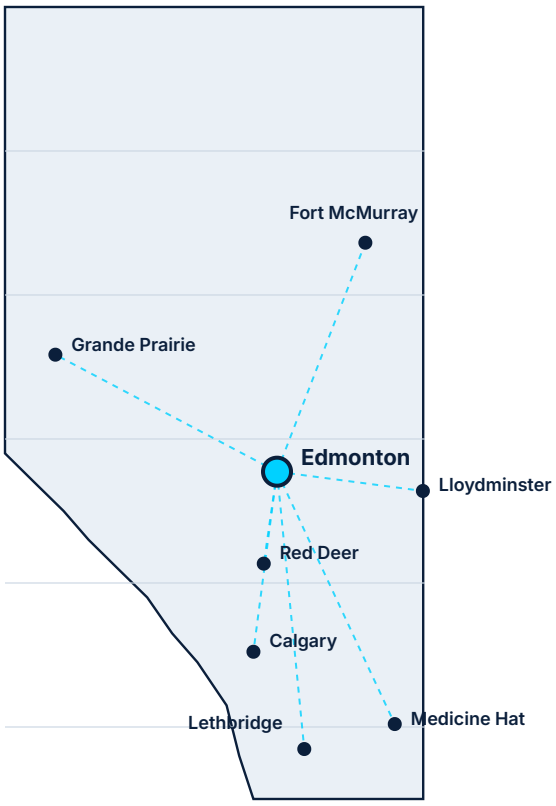

03 Scheduling
Appointments built around rotations.

04 Mobile deployment
The clinic sets up on or near site.

05 Selected services
Delivered by licensed eye-care professionals.

06 Eyewear or referral
Safety eyewear fitting, or referral onward.

07 Program reporting
Participation records, no personal health details.

DESIGNED FOR SITES THAT ARE HARD TO LEAVE

Starting from Edmonton, designed for Alberta's distances.

VPI expects early service to focus on Alberta, with a model designed to extend to other provinces.

STRAIGHT-LINE DISTANCE FROM EDMONTON	
Red Deer	**140 km**
Lloydminster	**230 km**
Calgary	**280 km**
Fort McMurray	**380 km**
Grande Prairie	**390 km**
Lethbridge	**430 km**
Medicine Hat	**440 km**

WHERE CLINICS COULD GO
Energy facilities
Construction sites
Manufacturing plants
Warehouses
Remote workplaces
Transportation terminals
Corporate campuses

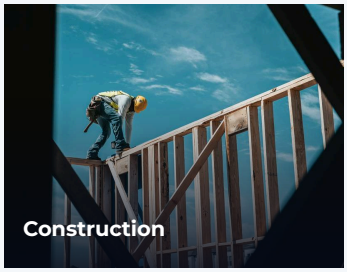

Schematic map. Cities are shown for reference only and are not service locations. Distances are straight-line (great-circle) estimates, rounded to 10 km.

APPLICABLE ENVIRONMENTS

Designed for workplaces where vision matters.

Safety-sensitive work, shift patterns, screen-intensive roles or distributed sites.

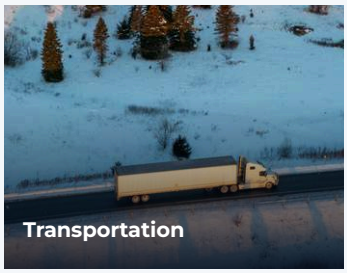

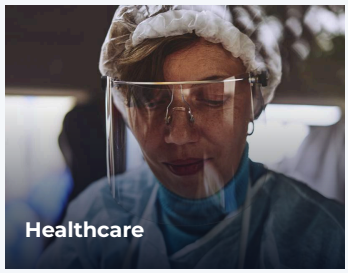

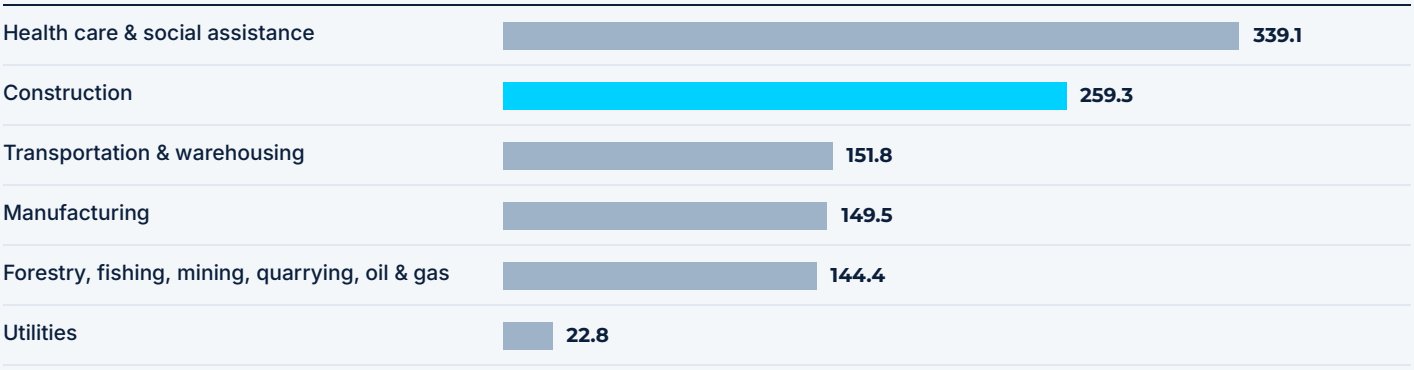

ALBERTA EMPLOYMENT IN SELECTED SECTORS · 2025

1.07 million Albertans work in these six sectors.

Thousands of people, annual average

41%

of Alberta's employment in 2025.

2.59M

people employed in Alberta (annual average).

These sectors are shown because eye hazards, visual demands or shift-based and distributed work are common in them. They are target environments for VPI's programs, not a representation of current customer relationships.

Source: Statistics Canada, Table 14-10-0023-01, Labour force characteristics by industry, annual (x 1,000), Alberta, 2025. Six-sector total (1,066.9 thousand) and share are VPI calculations from that table.

CLINICAL CONTINUITY

Completing the care pathway.

Workplace programs identify needs. Clinical care resolves them. VPI's long-term model connects the two, with clear referral and follow-up.

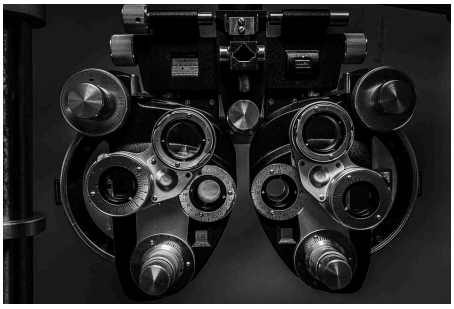

01 IN DEVELOPMENT · PLANNED

At work

Where the need is identified and the program is administered.

- Employer vision program
- Planned mobile vision clinic
- Safety eyewear fitting

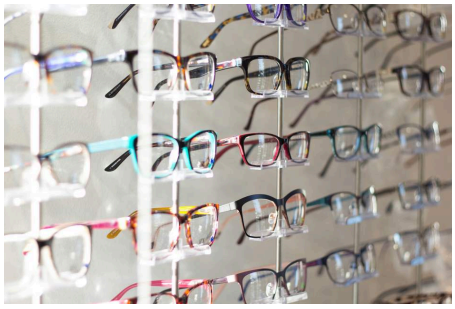

02 EXISTING CARE

In the community

Where most workers already receive eye examinations.

- The worker's own eye-care provider
- Current prescription
- Referral when needed

03 PLANNED

Clinical & optical

Conventional clinical and optical services to complete the pathway.

- Planned VPI clinical & optical network
- Follow-up and continuity of care
- Lunettes Emporium (future brand)

REFERRAL WHEN NEEDED →

← FOLLOW-UP & CONTINUITY

PRIVACY PRINCIPLE

The worker, not the employer, holds the clinical relationship.

Employers see program participation and authorization status. Examination results and clinical records stay between the worker and the eye-care professional.

PLANNED · NOT OPEN IN CANADA

Lunettes Emporium is a future clinical and optical brand intended to provide conventional eye-clinic and optical services within this broader delivery model. It is not currently operating in Canada. Clinical services will be delivered by licensed eye-care professionals.

05

VPI TECHNOLOGY

Technology built around real workflows.

VPI does not treat technology as an accessory to the business. It is part of the infrastructure—built by the same team, to the same standard, for safety teams, eye-care practices and VPI's own operations.

VPI SafetyOS™

Health & safety management

AVAILABLE NOW

VPI Mires™

Optometry & optical practice management

AVAILABLE NOW

VPI Command Centre

VPI's own operations platform

INTERNAL PLATFORM

TECHNOLOGY PORTFOLIO

Three systems. Different roles.

The portfolio separates commercial products from the infrastructure VPI uses to run its own operations.

COMMERCIAL PRODUCTS — EACH WITH ITS OWN SITE AND CUSTOMERS

VPI SafetyOS™

AVAILABLE NOW

BUILT FOR	Alberta contractors and their health & safety teams
WHAT IT DOES	Audits, incidents, work permits, corrective actions, training and emergency readiness in one system, on the phones crews already carry.
ACCESS	Commercial SaaS · safetyos.visionperformanceinc.ca

VPI Mires™

AVAILABLE NOW

BUILT FOR	Canadian optometry and optical practices
WHAT IT DOES	Scheduling and recall, clinical exam charting, billing and claims, dispensary and inventory, and a patient portal.
ACCESS	Commercial SaaS · mires.visionperformanceinc.ca

VPI Command Centre

INTERNAL PLATFORM

BUILT FOR	VPI staff only
WHAT IT DOES	Scheduling, logistics, client coordination, service delivery, reporting and invoicing for VPI's own programs.
ACCESS	Internal platform · not offered for sale

Organizations stay separate
Each company or practice works in its own isolated workspace.

Every change is on the record
Changes are written to an audit trail.

Access follows the role
Role-based permissions for every user.

Engineering principles described on the SafetyOS and Mires product sites.

SafetyOS by VISION PERFORMANCE INC.

● AVAILABLE NOW

Health & safety management that runs from the field.

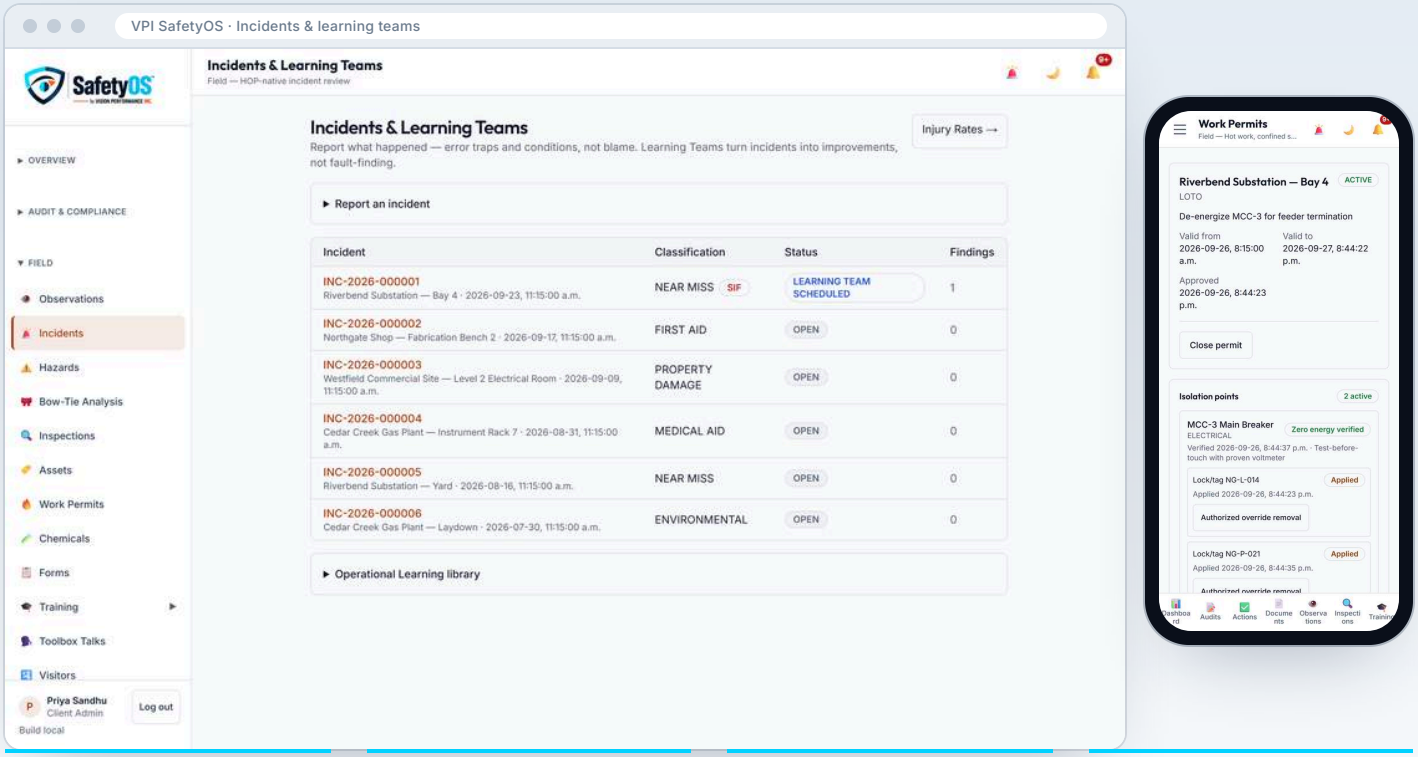

SafetyOS brings audits, incidents, work permits, corrective actions and training into one system—on the phones crews already carry, with reports that queue offline and sync when signal returns.

BUILT FOR

Alberta contractors and their safety teams

ONLINE

safetyos.visionperformanceinc.ca

Audits & compliance

- COR and ISO 45001 audits from protocol records
- Corrective actions
- Document control
- Safety meetings
- Analytics

Field safety

- Incidents and learning teams
- Hazard assessments (FLHA / JHA)
- Work permits and lockout/tagout
- Inspections and observations
- Bow-tie analysis

People & contractors

- Training and competency sign-off
- Toolbox talks
- Visitors and kiosk check-in
- Contractor prequalification

Emergency readiness

- Emergency alerts with acknowledgement
- Escalation and SOS contacts
- ERP plans and drills

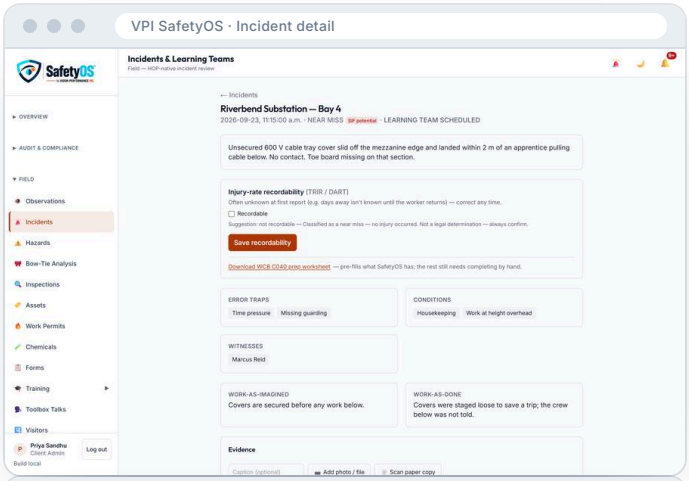

Genuine screen from a local build of the application, shown with fictional demonstration data. Names, organizations and figures are not real and do not represent VPI clients or activity.

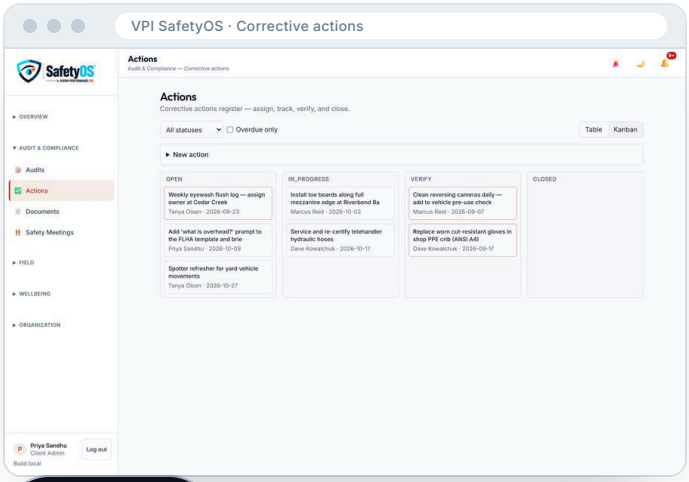

VPI SAFETYOS™ · CONNECTED RECORDS

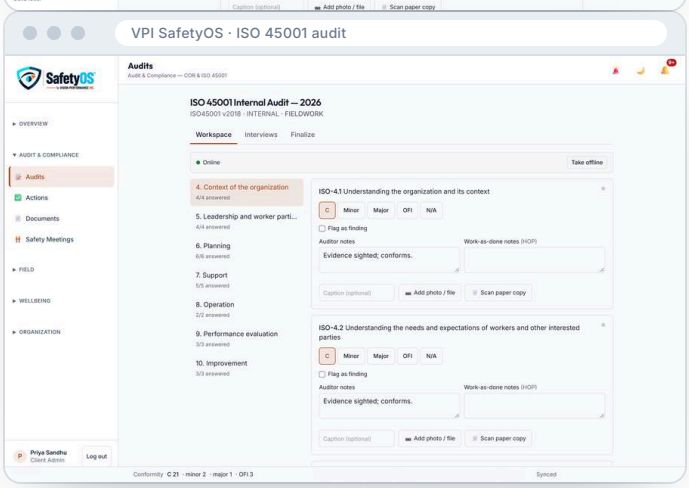

One system for the whole safety program.

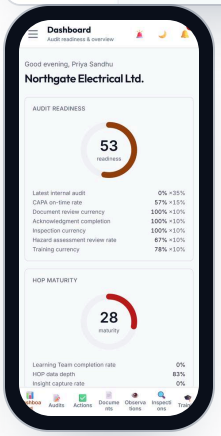

Not a stack of separate tools that each hold a piece of the picture. The same records connect: an incident raises a finding, a finding becomes an action, an action is verified.

BUILT SO RECORDS HOLD UP

Every change is on the record

Who did what, and when, is written to an append-only audit trail.

Companies stay separate

Every query is scoped to the signed-in company, tested on every code change.

Learning, not blame

Incident reports ask about conditions and error traps, in line with HOP practice.

Audit content is data

Audit questions live in protocol records, so they update without a software release.

Genuine screen from a local build of the application, shown with fictional demonstration data. Names, organizations and figures are not real and do not represent VPI clients or activity.

EYE-CARE TECHNOLOGY

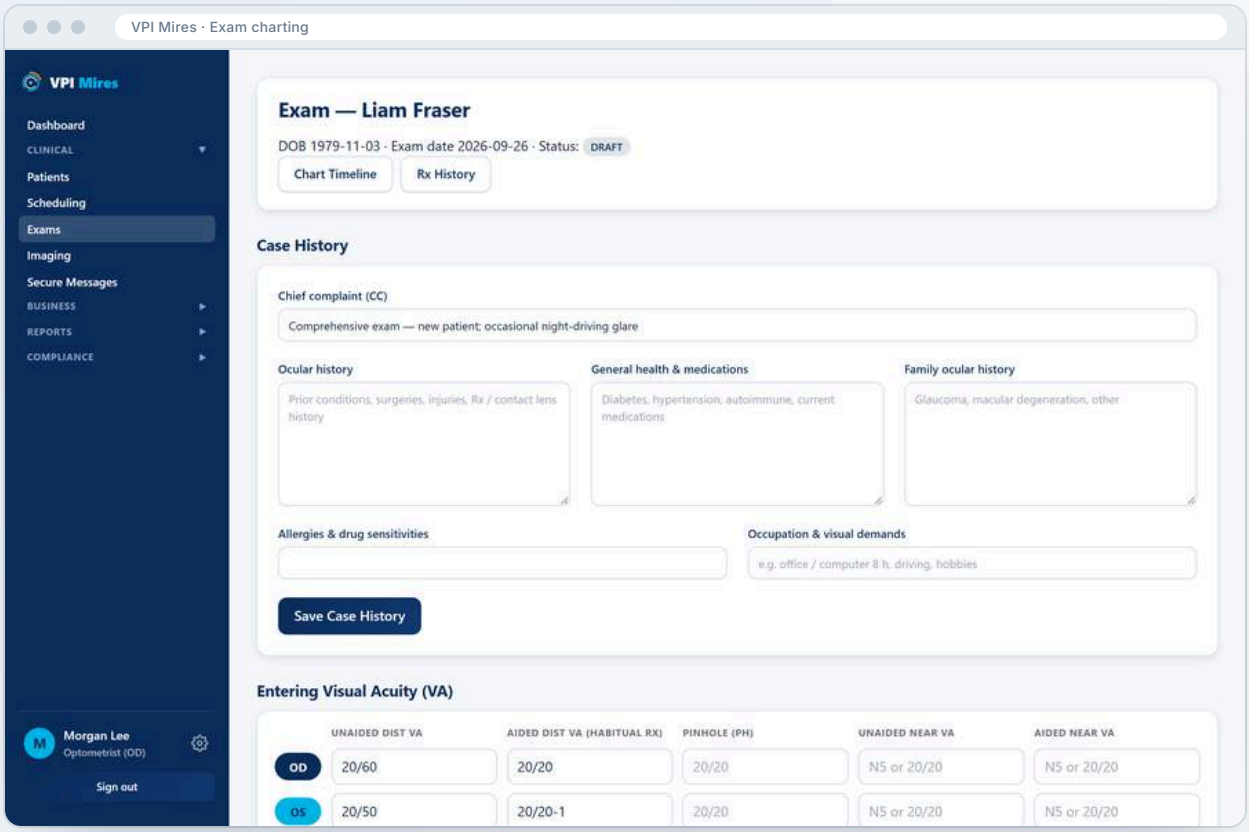

Practice management built for optometry.

VPI Mires
by Vision Performance Inc.

● AVAILABLE NOW

One system for scheduling, exams, billing and dispensary—built for how optometry and optical clinics actually run, across every location.

mires.visionperformanceinc.ca

Scheduling & recall
Book, confirm and remind, with self-booking and automated recall.

Clinical exam / EHR
Refraction, contact lens fitting and full exam charting built for optometry.

Billing & claims
Public and private-pay billing workflows in one place.

Dispensary & inventory
Frame catalogue, contact lens ordering and multi-location inventory.

Patient portal
Booking, messaging and document access for patients.

Compliance, built in
Tenant isolation, audit logging and consent management.

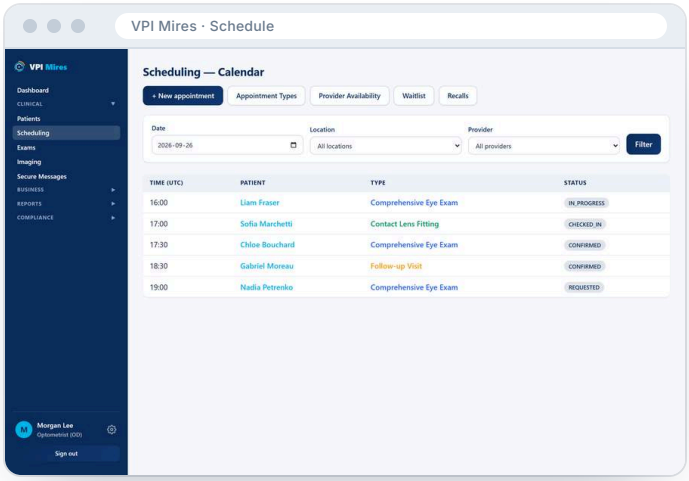

Genuine screen from a local build of the application, shown with fictional demonstration data. Names, organizations and figures are not real and do not represent VPI clients or activity.

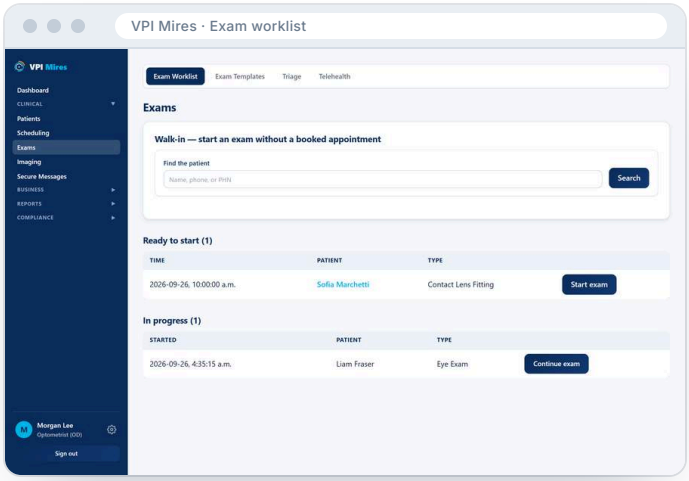

VPI MIRES™ · ONE PRACTICE, ONE SYSTEM

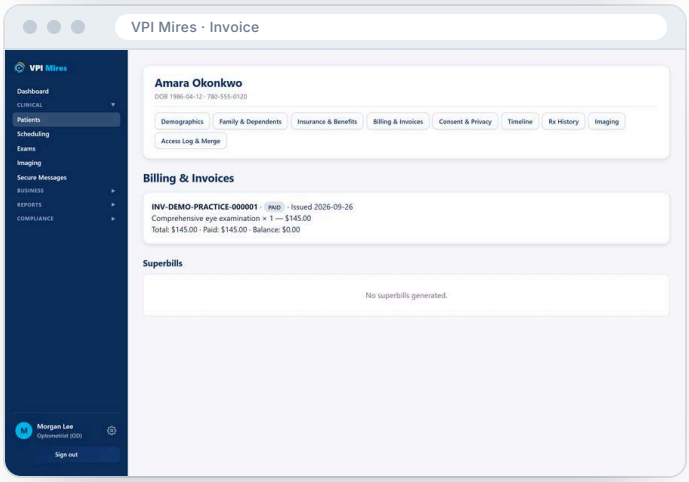

Follow the patient, not the software.

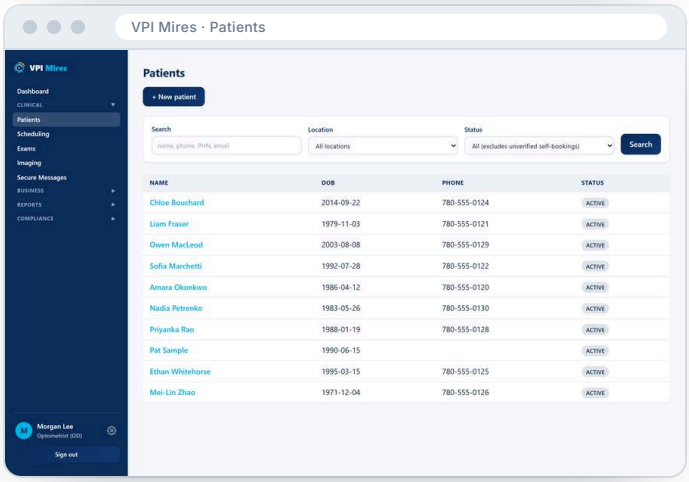

Mires connects the patient journey across front desk, clinical, optical and administrative work, so each step picks up where the last one left off.

01 Patient · 02 Booking · 03 Front desk · 04 Clinical exam · 05 Prescription · 06 Optical dispensary · 07 Billing / claims · 08 Recall

Front desk
Booking, check-in, confirmations and recall lists.

Clinical
Refraction, exam charting and prescriptions in one record.

Optical
Frames, lenses, orders and inventory by location.

Administration
Billing, claims and reporting across every location.

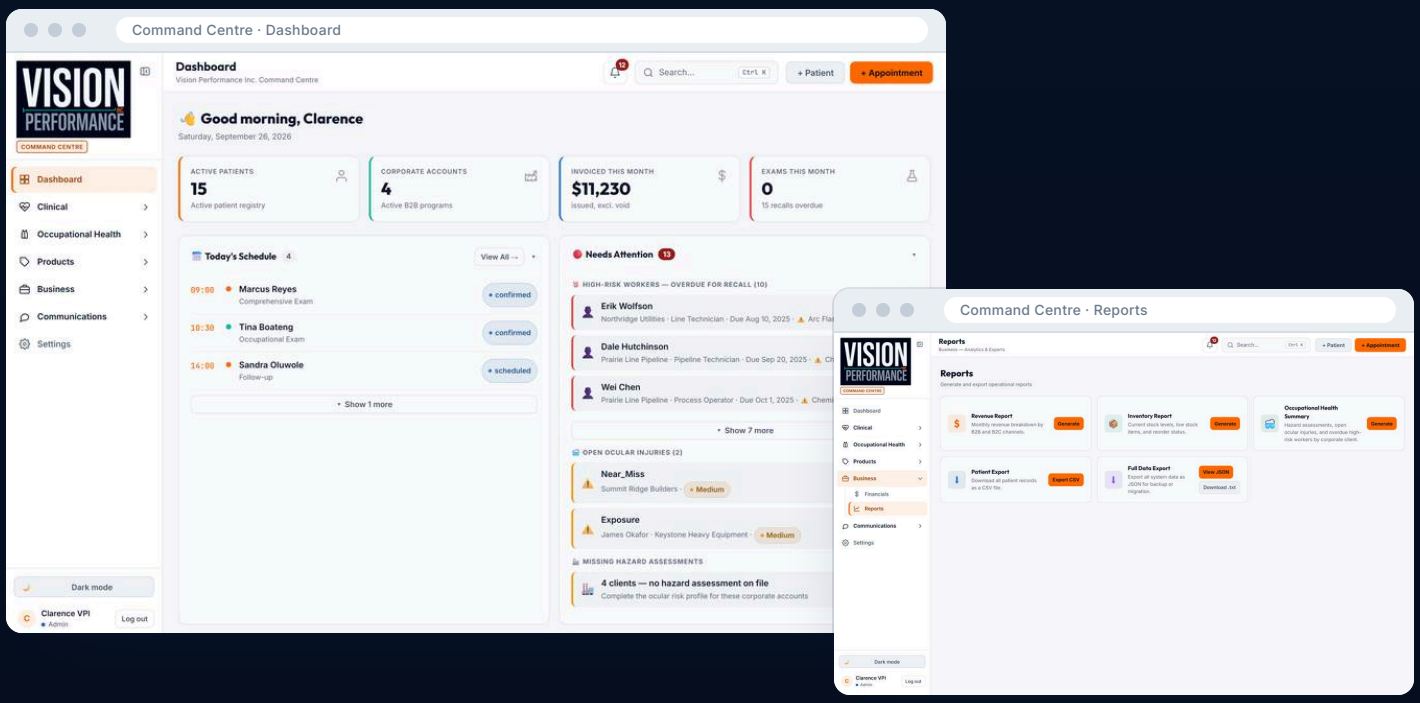

Genuine screen from a local build of the application, shown with fictional demonstration data. Names, organizations and figures are not real and do not represent VPI clients or activity.

INTERNAL PLATFORM · NOT OFFERED FOR SALE

The operating system behind VPI.

VISION PERFORMANCE INC.
COMMAND CENTRE

VPI Command Centre is proprietary infrastructure used by VPI staff only. It coordinates the people, places and paperwork behind every program.

Scheduling
Appointments and visits planned around shifts and sites.

Logistics
Mobile-service routing and deployment planning.

Client coordination
Employer contacts, programs and eligibility in one place.

Service delivery
Each step of a program tracked from request to completion.

Reporting
Program-level reporting for employers and for VPI oversight.

Invoicing
Billing tied to delivered services.

Internal workflows
Approvals, hand-offs and administration.

Workforce coordination
Matching the right people to each visit and program.

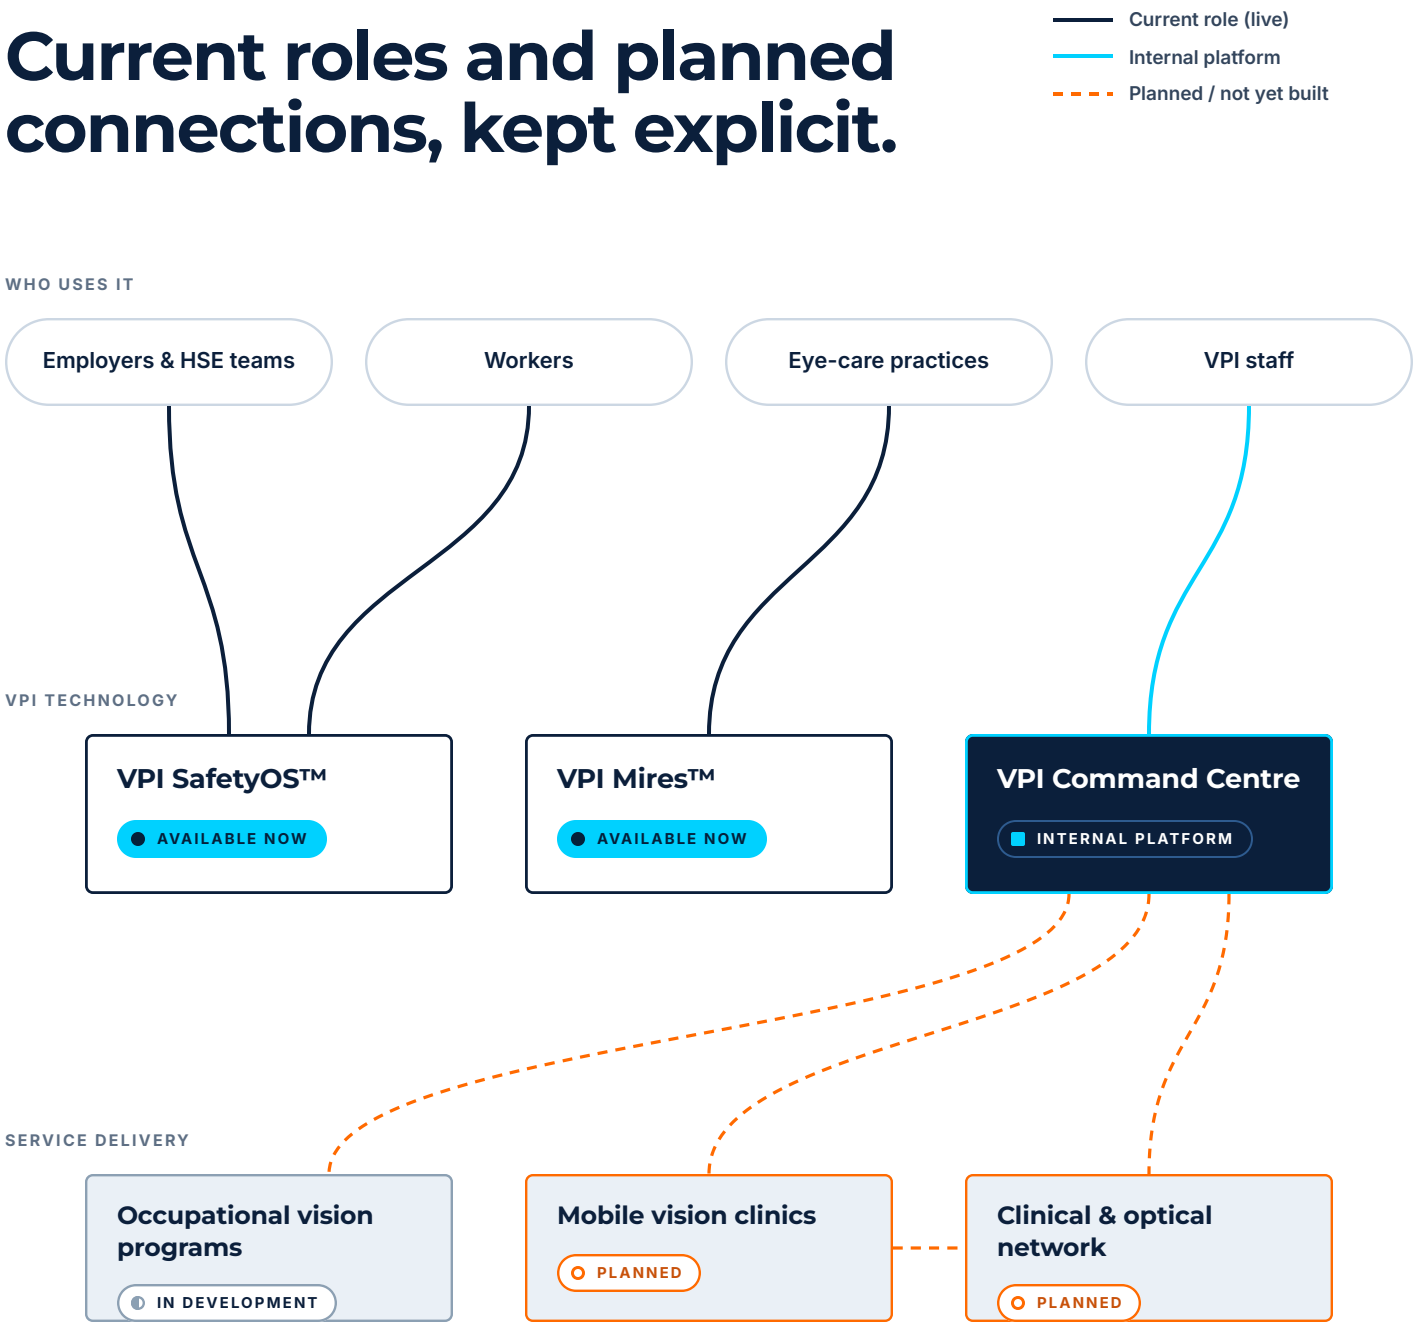

> **Building operational infrastructure before scaling physical service delivery is part of VPI's deliberate growth model.**

The same engineering discipline stands behind VPI SafetyOS™ and VPI Mires™.

Genuine screen from a local build of the application, shown with fictional demonstration data. Names, organizations and figures are not real and do not represent VPI clients or activity.

CONNECTED ARCHITECTURE

Current roles and planned connections, kept explicit.

Live today. Safety teams and workers use VPI SafetyOS™; optometry and optical practices use VPI Mires™; VPI staff use VPI Command Centre.

Planned. Command Centre is intended to schedule and record occupational and mobile services, and to support referral to the planned clinical network, as those services launch.

The diagram shows roles, not data integrations. Integrations between products will be described only once they are technically defined and built.

THE WORKER'S VIEW

One pathway a worker can actually follow.

The ecosystem becomes clearest from the worker's side: fewer hand-offs, clear information, and clinical details that stay private.

ILLUSTRATIVE FUTURE STATE

01	02	03	04	05	06	07
Role & needs identified	**Authorization**	**Eye examination**	**Selection**	**Fitting**	**At work**	**Replacement**
Program information explains what is covered and why.	A simple approval, with no health details requested.	With the worker's own eye-care provider, or by referral.	Choose from approved styles suited to the role's hazards.	Fitted for comfort, coverage and other PPE.	Eyewear that corrects vision and protects the eyes, all shift.	On schedule, or sooner after damage or a new prescription.
Role and hazard profile	Eligibility status only	Stays with the provider	Style and coverage	Fit confirmed	—	Replacement record

------ What the employer's program record holds at each step

Less time off shift

Planned mobile clinics would bring selected services on or near site.

Clear information

Workers know what is covered, and how to use it.

Privacy by design

Exam results stay between the worker and the eye-care professional.

Illustrative future-state journey; not a claim of current service deployment. Stock photograph.

VALUE

Built around what employers actually manage.

01 People

Access to eye care and clear program information for every eligible worker.

02 Program

Eligibility, authorization and replacement rules set once and applied consistently.

03 Safety

Visual requirements considered alongside the hazards in the hazard assessment.

04 Operations

Scheduling, administration and reporting handled with less internal effort.

DIFFERENT STAKEHOLDERS, ONE UNDERLYING SYSTEM

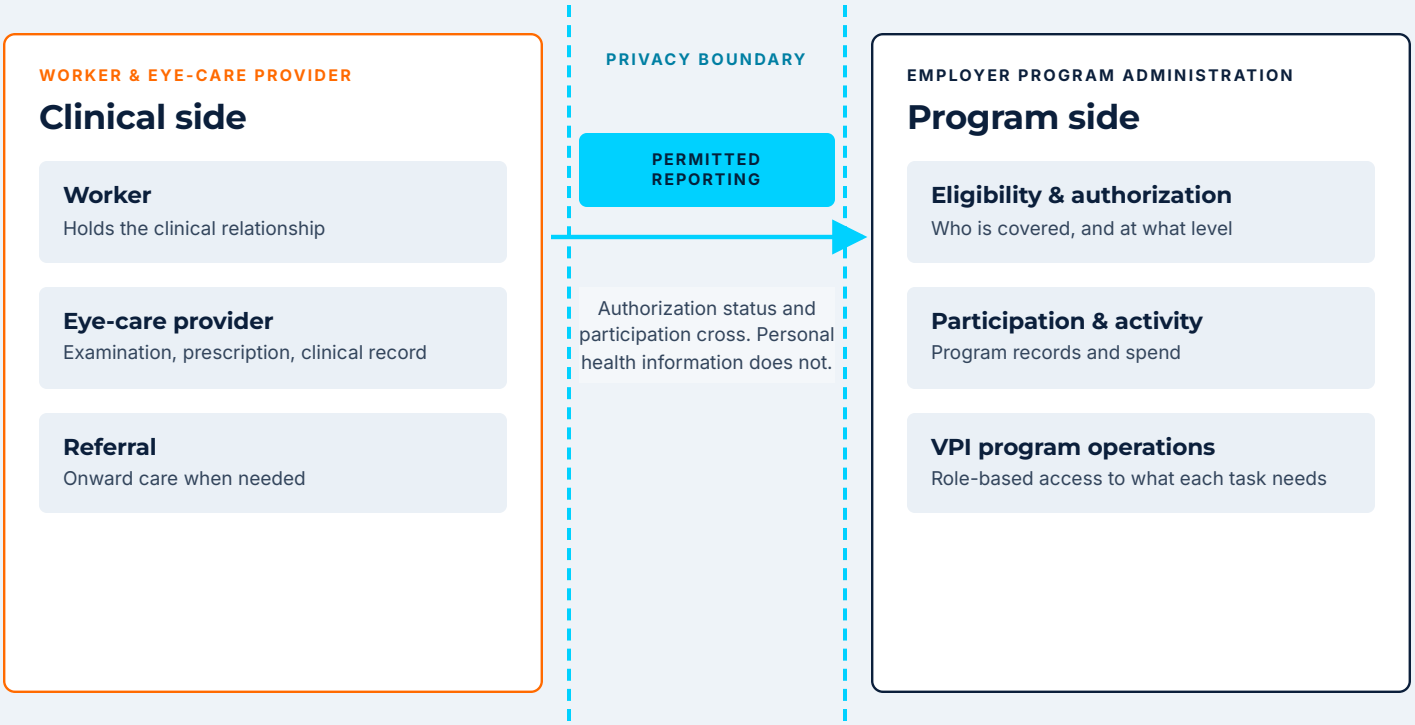

STAKEHOLDER	WHAT THEY GAIN	HOW VPI DELIVERS IT
Workers	Eyewear that both corrects and protects; care closer to work	Clear pathways, privacy by design
Employers & HR	A structured, auditable vision program	Program design, authorization, reporting
HSE teams	Eye protection aligned with the hazard assessment	Hazard-aligned eyewear pathway, PPE compatibility
Eye-care practices	Purpose-built practice software; future referral ecosystem	VPI Mires™; planned referral pathways
Industry & eyewear partners	A program channel for protective eyewear	Supply and program integration
Financing partners	A company building infrastructure before scaling	Staged, status-labelled growth plan

Value statements describe intended program outcomes. VPI does not claim measured reductions in injuries, costs or claims.

PRIVACY & RESPONSIBLE TECHNOLOGY

Built with trust as a design requirement.

Privacy, security and accountability are part of how programs and software are designed—not decoration added afterwards.

PRINCIPLES

Minimum necessary
Collect only what each step requires.

Clinical privacy
Exam results stay with the worker and provider.

Role-based access
People see what their role requires.

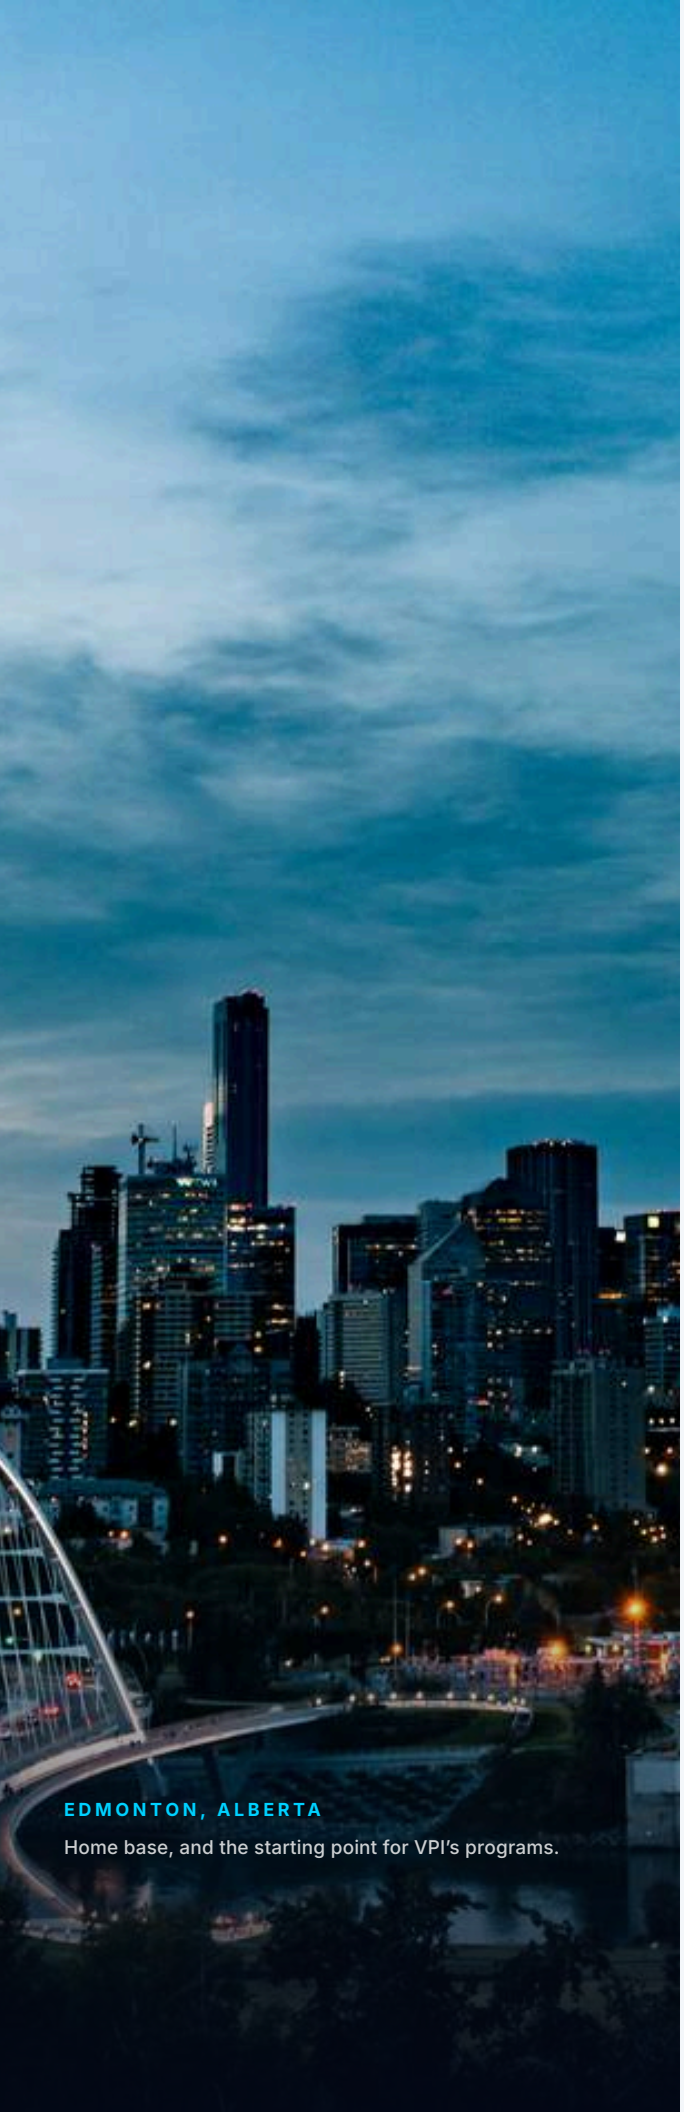

Auditability
Changes are traceable to a person and a time.

Separation
Employer administration and clinical information kept apart.

Responsible development
Tested, reviewed and changed deliberately.

Verified claims only
Compliance is stated only where independently verified.

VPI does not claim formal certification or regulatory compliance status in this profile. Such statements will be made only where independently verified.

EDMONTON, ALBERTA

Home base, and the starting point for VPI's programs.

GROWTH STRATEGY

Built in Alberta. Designed to scale.

Start focused, build the infrastructure, prove the model, then expand deliberately.

01 Foundation WE ARE HERE

Technology and corporate infrastructure

02 Alberta validation

Employer programs and partnerships

03 Canadian expansion

Broader service delivery across provinces

04 Selective North American expansion

Where the model and partners fit

05 Longer-term international opportunity

Considered once the model is proven

Stages describe strategic intent, not dates or commitments. Each stage depends on validation of the one before.

FOUNDER AND CEO

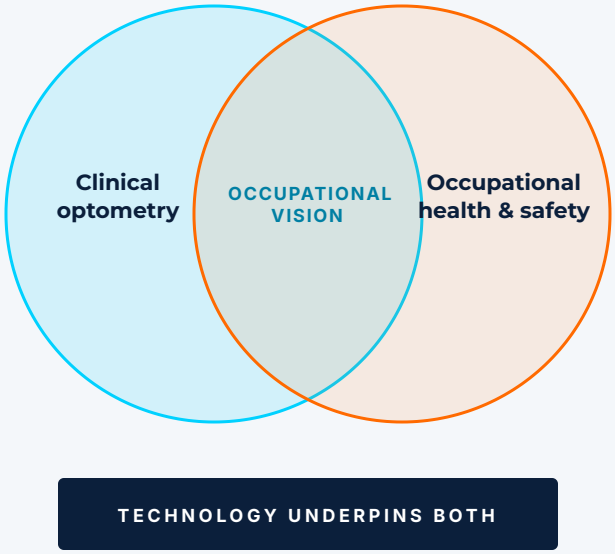

Clarence Nwokocha

FOUNDER AND CEO, VISION PERFORMANCE INC.

Built from two professional worlds that rarely share a room.

VPI grew from experience across clinical optometry and occupational health and safety. Technology became the third component as VPI began building the systems needed to support safety, clinical and operational workflows.

That combination—eye care, workplace safety and software, held by one founder—is the reason VPI treats occupational vision as a system rather than a product.

BACKGROUND

Optometric practice
and clinical leadership

Occupational health & safety
and industrial safety management

Technology
and product development

International
professional experience

Entrepreneurship
and company building

VPI's clinical services will be delivered by licensed eye-care professionals.

WORK WITH US

Building the ecosystem takes partners.

VPI is developing relationships across the workplace, clinical, eyewear, technology and financing communities.

01	**Employers**	Explore occupational vision programs and help shape planned mobile pilots.	→
02	**Clinical partners**	Explore care and referral partnerships as the clinical network is planned.	→
03	**Eyewear & industry partners**	Explore supply and program integration for protective eyewear.	→
04	**Software clients**	See VPI SafetyOS™ or VPI Mires™ with your own operation in mind.	→
05	**Investors & financing partners**	Discuss the infrastructure and the staged growth strategy.	→
